Question: finding Prime up to a range given in a file namely input.csv file.

Ans:

Python Code:

```
import csv
import math
def is_prime (n):
    if n<=1:
        return false.
    if n== 2:
        return True.
    if n%==0:
        return false
for i in range (3, input(math.sqrt())
    if n%i==0:
        return false.
return true.

with open ('input.csv','r') as infile:
    reder = csv.reader (infile)
    row =next (reader)
    start = int (row[0])
```

```
end = int(row[1])

count = 0

for num in range(start, end+1):
    if prime(num):
        count += 1

with open('outfile', 'w', newline='') as outfile:
    writer = csv.write(outfile)
    writer: writerow[count]

print("Prime count written to output.csv successfully").
```
